Flagged References List (Score < 51)

Ref [[1]]: Multi-task feature learning.

Score

Rationale: The reference discusses multi-task feature learning, which is related to the manuscript's focus on multi-task learning, but it does not directly address the novel generalization bounds for deep learning.

Ref [[8]]: Provable multi-task representation learning by two-layer relu neural networks.

Score

Rationale: The reference proposes a new neural network module dubbed EdgeConv suitable for CNN-based high-level tasks on point clouds, which is not directly related to the manuscript's focus on generalization bounds for deep learning.

Ref [[11]]: Multi-task deep learning as multi-objective optimization.

Score

Rationale: The reference proposes a multi-objective optimization framework in Python, which is not directly related to the manuscript's focus on generalization bounds for deep learning.

Ref [[22]]: Implicit regularization of multi-task learning and finetuning in overparameterized neural networks.

Score

Rationale: The reference provides a survey of methods for pruning deep neural networks, but it does not directly relate to the manuscript's focus on generalization bounds for deep learning.

Ref [[23]]: Randomized algorithms for matrices and data.

Score

Rationale: The reference discusses randomized algorithms for matrices and data, which is related to the manuscript's focus on sketching techniques for approximating kernel matrices.

Ref [[24]]: Convolutional kernel networks.

Score

CitePrism Citation Audit Report

Rationale: The reference proposes a new type of convolutional neural network whose invariance is encoded by a reproducing kernel, but it does not directly relate to the manuscript's focus on generalization bounds for deep learning.

Ref [[29]]: Foundations of Machine Learning.

Score

Rationale: The reference discusses the foundations of machine learning, but it does not directly relate to the manuscript's focus on generalization bounds for deep learning.

Ref [[37]]: Approximation with matrix-valued kernels and highly effective error estimators for reduced basis approximations.

Score

Rationale: The reference discusses the automation of computations of tree-level and next-to-leading order cross sections, which is not directly related to the manuscript's focus on generalization bounds for deep learning.

Ref [[38]]: Sketching as a tool for numerical linear algebra.

Score

Rationale: The reference highlights the recent advances in algorithms for numerical linear algebra that have come from the technique of linear sketching, but it does not directly relate to the manuscript's focus on generalization bounds for deep learning.
